HRSA Health Center Program Overview

Expanding School-Health Center Partnerships

March 30, 2022

Jen Joseph, PhD, MSEd
Director, Office of Policy and Program Development
Bureau of Primary Health Care (BPHC)

Vision: Healthy Communities, Healthy People
U.S. Department of Health and Human Services (HHS) and the U.S Department of Education Coordinating and Aligning Resources

March 22, 2022

Dear Governors:

The COVID-19 pandemic caused the Nation’s children and youth to face unprecedented challenges and further exacerbated preexisting inequities. Children across schools, after-school programs, and recreational activities closed, disconnecting nearly 60 million children and youth from essential resources and supports. Many families faced job loss, economic hardship, and food insecurity.

Our Nation’s children have been particularly impacted by the COVID-19 pandemic, including significant impacts on their mental health. As of June 2022, approximately 143,000 children have lost a parent or grandparent to COVID-19. Youth reports of psychological distress have doubled since the pandemic began, with 22 percent reporting depressive symptoms and 30 percent reporting anxiety symptoms. Trauma and stressor-related disorders, including acute stress disorder and adjustment disorder, are common among young children under five, as a result of the pandemic. Children and youth with intellectual or developmental disabilities and those with prior childhood trauma are at particular risk for pandemic-related mental health challenges. They are those who have faced previous discrimination in the healthcare system, including children and youth of color, immigrant children, children with disabilities, and those who are LGBTQ+.

The Biden-Harris Administration is committed to improving the health and well-being of children. This is why the U.S. Department of Health and Human Services (HHS) and the U.S. Department of Education (ED) have joined together to develop and align resources to ensure children have the physical and behavioral health services and support that they need to build resilience and improve outcomes.

School-Based Health Services – HHS Resources

March 2022

• Link to list of resources: https://www.hhs.gov/sites/default/files/school-based-health-services-resources.pdf
• Supports more than 90 programs that provide health care to people who are geographically isolated, economically or medically challenged

• HRSA does this through grants and cooperative agreements to more than 3,000 awardees, including community and faith-based organizations, colleges and universities, hospitals, state, local, and tribal governments, and private entities

• Every year, HRSA programs support equitable health care for those in need, serving people with low incomes, people with HIV/AIDS, pregnant people, children, parents, rural communities, transplant patients, other underserved communities, and the health workforce, system, and facilities that care for them.
Health Center Program

• Nearly **1,400** health centers operate **nearly 14,000** service delivery sites in every U.S. state, U.S. territory, and the District of Columbia.

• In 2020, more than **255,000 full-time staff** served nearly **29 million** patients.

• Health centers provide **patient-centered, comprehensive, integrated care** by offering a range of services:
  ▪ Primary medical, oral, and mental health services
  ▪ Substance use disorder and medication-assisted treatment (MAT) services
  ▪ Enabling services such as case management, health education, and transportation

Source: Uniform Data System, 2020
Of the nearly 29 million patients served in 2020:

- **91%** had incomes below 200% of Federal Poverty Guidelines
- **24%** were best served in a language other than English
- **62%** were racial or ethnic minorities

Health centers served:

- Almost **1.3 million** individuals experiencing homelessness
- Nearly **1 million** agricultural workers
- More than **376,000** veterans

Source: Uniform Data System, 2020
Health Centers, Children and Youth, and Schools

Children aged 17 and under
- **7.9 million** or **1 in 9** children and youth
- **976,000** COVID-19 vaccines administered

School-based services
- **560** health centers (41%) operate one or more school-based sites
- Total of **3,200+** school-based sites
- **658,551** students served via school-based sites
- **7,600** school-based COVID-19 vaccination clinics

Source: Uniform Data System, 2020 and Health Center COVID-19 Surveys

The Health Center Program is authorized under Section 330 of the Public Health Service (PHS) Act. Program requirements are available at [https://bphc.hrsa.gov/programrequirements](https://bphc.hrsa.gov/programrequirements).
High Quality, Comprehensive Care

62% of health centers provide substance use disorder (SUD) services

98% of health centers provide mental health services

77% of health centers were recognized as patient-centered medical homes in 2020

Required enabling services include outreach, eligibility and enrollment assistance, health education, translation, transportation, care coordination
Facilitating Equitable Access to Care

Health Center

- Community sites
- Mobile units
- Community partnerships and events
- School-based sites

In person care

Virtual care

Enabling services

Health related social needs
Services on Behalf of the Health Center

• Health center service delivery sites in schools are locations where a health center may carry out its activities.

• All health center activities (including in schools or other community settings) must be provided on behalf of the health center for the benefit of the current or proposed health center patient population, e.g.,
  ▪ Health center providers work under the direction of the health center;
  ▪ Health center providers deliver services in accordance with the health center’s policies and procedures; and
  ▪ The governing board retains control and authority over the activities/provision of any services.

Contact Health Center Program Support for additional details
HRSA Resources to Support School Based Health Services: Health Center Program Funding

**Health Center Program Funding**
- HRSA-funded health centers can request to add a school-based service site at any time. Some key criteria considered in HRSA’s review include:
  - Evidence of unmet need in the proposed service area
  - Demonstration that the proposed site will complement and not duplicate existing resources
  - Collaboration with other health centers and safety net providers to benefit the proposed patient population
  - Assurance that additional funding is not needed

**Health Center Program Supplemental Funding**
- HRSA awarded $5.4 million to 27 HRSA-funded health centers through the School Based Service Sites (SBSS) funding opportunity under the Health Center Program in September 2021.
- HRSA’s FY 2022 final appropriation included an additional $25 million to fund additional SBSS applications to support approximately 125 awards.
Thank You!

In the transformational power at the intersection of health and education
School-Based Health Services

Types of Services

- School nurses
- School psychologists
- School counselors
- School social workers
- Health educators
- Nutritionists
- School-based health care/school-based health centers
Why School-Based Health Care?

Artist: Scott Spencer
School-Based Health Care

• Primary Care
  ✓ Preventive services
  ✓ Acute and chronic care
  ✓ Immunizations

• Oral Health

• Vision Services

• Behavioral and mental health
  ✓ Screening, assessment, and early intervention
  ✓ Group and individual counseling
School-Based Health Center Defined

• Shared commitment between a school, community, and health care organization(s) working with students and families

• Support students’ health, well-being, and academic success by providing an array of services such as:
  • Medical
  • Mental health/ Behavioral counseling
  • Oral Health Care
  • Vision Care

• Works with existing school services and care providers but does not replace
School-Based Health Centers: recommends the implementation and maintenance of School-Based Health Centers in low-income communities to improve educational and health outcomes.

Vaccination Programs

Schools and Organized Child Care Centers: strong evidence of effectiveness in increasing vaccination rates and decreasing rates of vaccine-preventable disease and associated morbidity and mortality.
Health Centers...

Help students and their families overcome access barriers

TRANSPORTATION  TIME  LANGUAGE  FINANCIAL BARRIERS
Education Partner Contributions

- Space in school
- Access to IT
- Cleaning services
- Security
- Utilities
- Staff support for the health services
- Marketing platforms like school website, Facebook
- Bi-directional consent/FERPA

Health Center Partner Contributions

- Clinicians and other staff
- Equipment
- Electronic health records
- Coding and billing capability
- Lab services
- Marketing and enrollment efforts
- Bi-directional consent/HIPAA
Working together we can . . .

In the transformational power of the health and education intersection.
THANK YOU!

Additional Questions? Contact us at:
info@sbh4all.org or ashore@sbh4all.org
Case Example 1:
Blue Ridge Community Health Services – Western North Carolina
BRCHS Health Center School-Based Service Sites

• 7 county service area in Western North Carolina

• Sites provide a combination of:
  • Physical, comprehensive services
  • School-linked services
  • Telehealth services
  • Tele-mental health services
  • Behavioral health only sites
How Did We Get Started?

• Blue Ridge Health has utilized a school-based health services model of care since 1996.
  • Original funding came through 330 grant programs.
• In 2022, we are now providing services in a 7-county area with 30+ school-based service sites and we are continuing to grow.
  • This growth is due to being responsive to school needs and providing support in those communities with the highest needs.
• We determined needed staffing models over time.
• We relied on start-up funding for our first 2-3 years until the school-based health services model of care became sustainable through billing.
Leveraging Our Health Center Infrastructure

- Financial modeling - Our school-based health model of care becomes sustainable after around 2-3 years with outpatient billing structure (PPS rate).
- We applied for HRSA grant opportunities.
- We link students and families to additional primary care, dental, and specialty services (pediatric neurology & pediatric psychiatry) provided by the health center.
- Behavioral health counseling can be completed at the school, pediatrics office, or behavioral health offices (integrated or co-located with our health center).
- If a family prefers tele-mental health, we continue to provide a hybrid model between school and home.
What Happens After COVID?/Behavioral Health Needs

• Continue to support COVID-19 testing and vaccinations/boosters.
• Assist with student Well Child Care, immunization needs, and other missed care during COVID-19.
• Work in collaboration with other agencies for behavioral health needs and services (there’s enough for everyone).
• Continue offering flexibility for behavioral health counseling services.
  • Hybrid model between school and home
• Continue to assess needs in partnership with schools and communities – Crisis support services with HCPS.
Beyond COVID – Challenging Behavioral Health Needs

• Continue to assess needs in partnership with schools and communities:
  • Crisis support services
  • Responding to student, family, and community needs
  • Form new partnerships and engage in new initiatives
  • Build procedures and protocols
  • Support students & staff at the whole school, Tier 1 level

• Work in collaboration with other agencies for behavioral health needs and services (there’s enough for everyone).
Case Example 2:
Cabin Creek Health Systems

West Virginia
Our Health Center School-based Services Story

• Started services in 2001 as dual community and school-based health site: Riverside High School.
• Expanded to elementary, middle, and other high school sites.
  ▪ Currently servicing WV’s largest county and capital city
  ▪ 3 high schools, 3 middle schools, 3 elementary schools in 3 “feeder school” clusters
  ▪ Planned expansion in elementary schools in all clusters
Resiliency Training In Action

- Funding sources include local and federal grant applications.
- Integrated primary care and behavioral health care:
  - Traditional in person access
  - Emerging tele-health expanded access
  - Hybrid model → “wrap around” coverage
Why Is This Work Important?

• Rural population with increased risk of:
  ▪ Grandparents-as-parents
  ▪ Transient care
  ▪ Kinship care
  ▪ Opioid epidemic

• Integration of social services, behavioral health services, and partnered assessment of social determinants of health in high-risk populations

• Increased support for vulnerable populations of health:
  ▪ LGBTQIA+
  ▪ Very low socioeconomic status
  ▪ Low health literacy
Mission In Real Time

• Elementary Schools
  ▪ Access to acute and primary preventative care
  ▪ Navigating services
  ▪ Health literacy

• Middle Schools
  ▪ Continue health literacy
  ▪ Maintain cooperative role with school counselors
  ▪ Early identification of increased risk populations
    ✓ Utilization of ACE scores
    ✓ Trauma history
    ✓ Substance use disorder screening/education/prevention
    ✓ Nicotine use disorder screening/education/prevention
Mission In Real Time, Cont.

- Middle Schools, continued
  - Behavioral Health coverage and implementation of services
    - Yoga
    - “Smoothie Tuesday”
    - Navigation of food distribution outside of school hours
Mission In Real Time, Cont.

• High Schools
  ▪ Integrated partnerships with administration → communication of services
  ▪ Pre-COVID weekly huddle with PCPs, BH, truancy officer, school RN
    ✓ Identify and make follow up plan for high-risk students

• Supportive atmosphere
  ▪ Trans-medicine gender affirming care → decreased lifetime risk of suicidal ideation in trans youth

• BHP/school counselor partnership
  ▪ Creation of “safe spaces room”
    ✓ Sensory and mindfulness room → COVID associated funds
COVID Onward

• Community drives for COVID vaccination in the school-based setting
  ▪ Partnership with local Health Department to fill needs in schools without existing SBHC

• Identifying gaps in coverage/care
  ▪ Immunization, well visits → population of health manager

• Recruitment/Retention
  ▪ Strengthening existing school partnerships
  ▪ Behavioral Health coverage as linkage to care
  ▪ Continual conversation with local schools
The School-Based Health Alliance’s Children’s Health and Education Mapping Tool is a free, interactive resource for individuals seeking to address chronic inequities among low income children and adolescents.
School-Based Vaccination Resources:

Included topics:

- Why Schools
- Identify Contacts to Approach
- Planning Steps
- Staffing Resources
- Communications, Building Trust, and Recruitment
- Operations and Implementation Planning
- Opportunities
- Sample Resources from Health Centers and Schools

Why Schools?
Administration of COVID-19 vaccines is essential to pediatric and adolescent health and the health of our nation. Vaccinating the nation’s vulnerable and underserved youth is a priority of the Health Resources and Services Administration (HRSA), the National Association of Community Health Centers (NACHC), and the School-Based Health Alliance (SBHA). Serving more than 29 million patients across the country, health centers play a critical role in achieving this goal. Health centers offer a broad array of primary, behavioral health, and preventive care services. They serve the most vulnerable patients and reduce barriers such as cost and lack of insurance. Too many children experience persistent disparities in health care access, quality, and outcomes. By partnering with schools to administer COVID-19 vaccinations to children and adolescents, health centers can improve access to care, particularly for children and adolescents.
Health Centers and Schools: Uniting for Young People’s Success

Powering up a partnership in your community can seem like a big task — but it doesn’t have to be! Try out some of these ideas for ways to get started and important tips to keep in mind.
School-Based Health Center (SBHC) Planning Checklist

- Establish SBHC regional planning committee
- Orient SBHC planning committee to the SBHC model
- Identify a medical sponsor organization and other potential health care provider partner organizations
- Visit existing SBHC(s)
- Establish SBHC advisory group (e.g. principal, other school leadership, school social worker, students, parents/guardians, school nurse, sponsor organization member, and others.)
- Conduct community readiness assessment
- Conduct SBHC needs assessment
- Develop and implement marketing and engagement plan for target audiences and gatekeepers
- Identify potential SBHC location(s) via site visit(s) Select a well-considered location for the SBHC based on readiness assessment, needs assessment, site visit(s), and needed construction/renovation
- Determine appropriate staffing
- Develop narrative business plan

Consulting Services
The School-Based Health Alliance is a highly respected provider of extensive technical assistance and training to the school-based health care field. Our school health consulting staff has decades of experience in designing, operating, and evaluating school-based health center (SBHC) programs. Let us put that expertise to work for you!

- Complete a pro-forma business plan to determine funding needs and potential revenue
- Solicit capital and operational funding from variety of sources
- Develop necessary agreements and procedures to bill commercial and public insurance
- Draft and execute a memorandum of understanding among SBHC partners (e.g. school district, medical sponsor organization, behavioral health, oral health, local department of health.)
- Develop comprehensive SBHC consent form that includes bi-directional information sharing to promote continuum of care (e.g. school nurse, school counselor, PCP, dentist, parent/guardian.)
- Complete SBHC renovation/construction process
- Engage students to ensure SBHC space is student-friendly
- Purchase appropriate equipment and supplies
- Ensure appropriate technology access in collaboration with school
School Nursing & School-Based Health Centers in the United States

Working Together for Student Success

School nurses and school-based health centers working together share a critical mission: protecting and advancing the health and well-being of our nation's school-age children. One does not replace the need for the other. Each has a distinct and complementary function.

What happens when school nurses and school-based health centers work together?

- Students' health, overall well-being, and academic success improve.
- Students acquire the health knowledge and skills they need to become independent in providing self-care.
- School absence rates decrease and graduation rates increase.
- Student access to equitable health care increases, including health promotion, disease prevention, and illness management.
- Continuity of care occurs when health professionals coordinate with each other about student health needs. This frees educators to focus on teaching and allows parents/caregivers to remain at work.

School-Based Health Centers

Bring a multidisciplinary healthcare team from local health organizations to provide an array of services to the school, in person and/or via telehealth, which may include:
- Primary care
- Prevention and early intervention
- Behavioral health counseling
- Oral health services
- Health education and nutrition counseling
- Lab work and prescriptions

Represent a shared commitment between schools and healthcare organizations to support the health, well-being, and academic success of students.

Partner with school nurses to increase access to healthcare services that help students succeed in school and life.

Create a culture of health within the school community to include students, families, and school staff.

Are recommended by the CDC Community Preventive Services Task Force as an evidence-based intervention to address disparities in health and education outcomes.

Provide access to 6.6 million K-12 students (23%) from more than 2,500 school-based health centers in approximately 10,900 (10%) of public schools.

Are typically funded by:
- Healthcare systems
- Grants (public and private)
- Insurance reimbursement

Learn more at www.sbhail.org

School Nurses

Bring a multidisciplinary healthcare team from local health organizations to provide an array of services to the school, in person and/or via telehealth, which may include:
- Identifying and addressing mental health issues
- Leveraging the field on health disparities and promoting healthy behaviors
- Enrolling children in health insurance and connecting families to healthcare providers
- Handling medical emergencies

Advocate for equitable, student-centered school health policies, programs, and procedures.

Lead the school health services team to address actual or potential barriers to student health and academic success.

Develop, implement, and evaluate a student's individualized healthcare plan and emergency care plan.

Collaborate with health and education leaders to design systems that allow students and school communities to develop their full potential.

Serve as public health sentinels within and across school populations.

Monitor for symptoms of disease

Screen for early detection of conditions that can lead to adverse health and academic outcomes.

Mitigate potential health issues and school emergencies.

Provide access to individual students and entire school population; more than 95,000 nurses are employed full time in 39.3% of schools.

Are typically employed by schools and districts, and paid with regular or special education funds.

Learn more at www.nasn.org

Why should schools have both a school nurse and a school-based health center?

School nurses and school-based health centers assume leadership roles to advocate for healthcare & education reform, which includes funding and reimbursement, policy development/implementation, as well as a uniform data set.

Communication that is reciprocal and respectful helps to ensure continuity of healthcare services inside and outside the school setting. This allows both the school nurse and the School Based Health Center to work together toward a common health goal for the student.

School nurses and school-based health centers coordinate care, thus providing the best student-centered care possible, and ensuring the student is healthy, safe, and ready to learn.

School nurses and school-based health centers work collaboratively to address both social needs and to advocate as partners for systems level changes to help alleviate social determinants to health and their causes.

The "social determinants of health," refers to the conditions in which people are born, live, learn, play, work, age, and worship, as well as what kind of access they have to healthcare services. Together those affect a wide range of health functions and overall quality-of-life outcomes.
What Are School-Based Health Clinics?

Schools provide health care in many ways, from nurses’ offices for routine health needs to professionally equipped school-based health clinics staffed by trained medical professionals.

More and more schools are offering these school-based health clinics to students. Because regular physician's offices may only be open during school or work hours, parents may be forced to choose between missing school and work and seeking care. Also, transportation to an outside office can be difficult. School-based clinics help busy parents get their children medical care and avoid student absences. The best school-based clinics provide quality health care as a comprehensive medical home to students in the location most accessible to them. Trained school nurses, physicians, and psychologists keep children healthy and ready to learn.

There are many benefits of school-based clinics. School clinics offer prevention and screening services to students, and students can access well-child visits, sports physicals, sexual health education, sick visits, and vaccinations. These clinics can also spot and treat mental health concerns, even with same-day appointments. Students with chronic conditions such as asthma, attention-deficit/hyperactivity disorder, and diabetes can be cared for in the school environment, often with input from teachers who know them well. Some students and families may worry about the privacy of care when they see a clinician at school, and parents should make sure these clinics uphold the highest privacy and confidentiality as in a standard physician's office setting. School clinics can increase access to health care overall for children. The location and availability of health care services makes it possible to address a wide range of needs and populations. School-based clinic visits are easier to fit into a busy schedule, which results in fewer absences from classes. Students can stay on track better with their academics because they do not have to leave school to attend a physician’s appointment. School-based vaccination programs provide a safe and efficient way to vaccinate children. This is important because vaccines help keep children safe from getting sick in the school environment and prevent children from bringing sickness home to their families.

Students may want to go to the clinic without their parent. Because policies around these visits vary by state, it is encouraged to research your local policies about services that can be provided to students without the parent present. However, parental involvement in school health activities is very important for promoting healthy behaviors and managing chronic conditions. Caregiver engagement with school health programs can help connect clinic staff with community resources. Additionally, parental involvement enhances teacher and school staff awareness about caring for children with chronic illnesses. This supports a healthy, healthy environment for all children.
