This document provides suggestions to help you use your school climate data to make meaningful interpretations about the topic of Discipline within your state, district, or school, taking into account the viewpoints of the people who took the survey in your state, district, or school (i.e., students, instructional staff, noninstructional staff, parents/guardians).

It accompanies the School Climate Improvement Resource Package (SCIRP) Data Interpretation Guide, which contains information, support, and resources to help you interpret and use your survey results, using the U.S. Department of Education (ED) School Climate Surveys (EDSCLS) model of school climate domains and topic areas as a framework. We encourage you to read the full Data Interpretation Guide, another resource within the SCIRP, before using this Discussion Guide so that you have a better understanding of the model and types of results you will see.

This document is intended for use by EDSCLS users as well as users of other school climate surveys, which often include a topic area similar in composition to the Discipline topic area in the EDSCLS. Directions specific to EDSCLS users are denoted in this guide with the EDSCLS logo (right).

This guide, along with the Data Interpretation Guide, can help you derive meaning from your state’s, district’s, or school’s Discipline results, which you can use to identify areas for improvement. In the following sections, you will find:

- A definition of discipline as it relates to school climate
- Guiding questions to help you think through your Discipline data from a multi-tiered perspective—universal and targeted (Click on the Data Interpretation Guide and the Reference Manual to find additional information on multi-tiered approaches.)
- Guiding questions organized by data types (Discipline scale scores and item-level Discipline data):
  - Initial and deeper guiding questions about discipline for districts (Appendix A)
  - Initial and deeper guiding questions about discipline for schools (Appendix B)

---

1 This document provides strategies applicable to public schools and districts, including charter authorizers, charter management organizations, education management organizations, individual charter schools, charter local educational agencies, and private schools.

2 Information in this Discussion Guide has been updated to reflect a change in the reporting of scale scores. Beginning with the release of the EDSCLS platform Virtual Machine (VM) 3.0 in December 2017, the platform reports benchmarked scale scores, allowing users to compare scale score levels across the EDSCLS domains and topic areas. Note that the scale scores themselves cannot be compared across domains; only the levels in which they fall can be compared in this way.

3 States that host the EDSCLS can use the same suggestions as given for districts; states also will be able to compare data across their districts, as well as across their schools.
A link to a Discipline webpage that includes resources on interventions that districts and schools can implement immediately to address specific areas of need as well as longer term resources for improving discipline

- Additional guiding questions for those wishing to use average (mean) Discipline values:
  - Initial and deeper guiding questions about discipline for districts using average (mean) Discipline values (Appendix C)
  - Initial and deeper guiding questions about discipline for schools using average (mean) Discipline values (Appendix D)

Schools and districts are also required to report information about school climate, including discipline, pursuant to the ED's Civil Rights Data Collection (CRDC). Information collected by the EDSCLS or other similar surveys may help schools and districts prepare their responses to the CRDC survey. More information about the CRDC can be found at ocrdata.ed.gov.

What Is Discipline?

For the purposes of interpreting data, we have defined discipline as referring to the rules and strategies applied in school to manage student behavior and practices used to encourage self-discipline. School discipline addresses schoolwide, classroom, and individual student needs through broad prevention, targeted intervention, and development of self-discipline. Approaches to school discipline range from positive (e.g., schoolwide school climate improvements, use of restorative practices) to punitive (e.g., suspension, expulsion, corporal punishment). How school discipline is handled has a great impact on the learning environments of schools.

You can find a brief overview of discipline as it relates to school climate here.

Guidance for Districts and Schools

1. Examining Discipline Data Overall: Focus on a Universal Approach

You can use your Discipline scale scores to focus on a universal approach to improving discipline. Scale scores (described in detail in the Data Interpretation Guide) are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area such as Discipline, is a more robust measure than attempting to measure that topic by asking about it with a single item.

Beginning with the release of the EDSCLS platform VM 3.0 in December 2017, the way the EDSCLS platform reports scale scores changed. Based on psychometric benchmarking, the scale scores are anchored into fixed cut scores across EDSCLS domains and topic areas, allowing users to compare all scale score levels no matter the topic or domain (i.e., you can compare benchmarked scale score levels for topic areas within and across the three EDSCLS domains:
Engagement, Safety, and Environment). The platform produces graphs showing three “performance” levels into which the benchmarked scale scores may fall: least favorable, favorable, and most favorable.4

CAUTIONS: You cannot compare the scale scores themselves across domains; only the levels in which they fall can be compared in this way. (However, you can compare the scores themselves within domains.) Also, you cannot compare older “legacy” scale scores to newer benchmarked scale scores.

Because any EDSCLS data produced by platforms lower than VM 3.0 are not recalibrated, the scale scores they produced, called “legacy” scores, cannot be compared to the new benchmarked scale scores. If you want to preserve a trend line, you can convert your older legacy scores from prior years to benchmarked scale scores and then compare across years. You will find information on how to convert legacy scores to benchmarked scores at https://safesupportivelearning.ed.gov/edscls/benchmarks.

After you have these data for your district’s or school’s students and staff, and you have read the Data Interpretation Guide, you can use initial guiding questions in Appendix A (for districts) and in Appendix B (for schools) to help make meaningful interpretations of your results.

If you are a district, click on Appendix A to go to initial guiding questions for overall scale scores.

If you are a school, click on Appendix B to go to initial guiding questions for overall scale scores.

Average (mean) topic area values (see “Appendix C. Average (Mean) Topic Area Values” in the Data Interpretation Guide) also can be used to focus on a universal approach to improving Discipline. As described in the Data Interpretation Guide, average (mean) topic area values can be used to gauge how favorably respondents perceive the topic.5

If you are a district, click on Appendix C to go to initial guiding questions for overall average (mean) Discipline values.

If you are a school, click on Appendix D to go to initial guiding questions for overall average (mean) Discipline values.

4 The EDSCLS platform produces graphs showing three “performance” levels into which the benchmarked scale scores may fall: Least Favorable (scale scores below 300): The most likely answer to each positively valenced question in the scale is disagree or strongly disagree; the most likely answer to each negatively valenced question in the scale is agree or strongly agree. Favorable (scale scores 300–400): The most likely answer to each positively valenced question in the scale is agree; the most likely answer to each negatively valenced question in the scale is disagree. Most Favorable (scale scores above 400–500): The most likely answer to each positively valenced question in the scale is strongly agree; the most likely answer to each negatively valenced question in the scale is strongly disagree. (See the Data Interpretation Guide for further information.)

5 Average (mean) topic area values are not directly available from the EDSCLS platform but can be calculated from raw survey data. See Appendix C in the Data Interpretation Guide for information about calculating, using, and interpreting average (mean) topic area values.
2. Examining Discipline Data Across Student and Staff Respondent Characteristics: Focus on a Targeted Approach

Discipline scale scores broken out by respondent characteristics provide a richer set of data and a way to see how perceptions of discipline differ across subgroups of students and staff.

Benchmarked scale scores are produced for EDSCLS users for the following subgroups.\(^6\)

- Student scale scores per topic area can be examined by:
  - Gender,
  - Race/ethnicity, and
  - Grade.

- Staff (instructional and noninstructional) scale scores per topic area can be examined by:
  - Gender and
  - Race/ethnicity.

Note: In the event of a possible disclosure risk that would allow a respondent or small subgroup of respondents to be identified (e.g., if there is only one Asian teacher in the school), the EDSCLS platform will suppress the results for that subgroup (i.e., results for that subgroup will not be shown). (To understand how a small subgroup perceives school climate, see the Reference Manual for tips on conducting interviews and focus groups.)

Examining student and staff perceptions of discipline in your district or school by respondent characteristics can be extremely useful, not only in understanding the areas of strength and weakness in your school environment, but also in targeting interventions. For example, if perceptions of discipline differ by student characteristics (gender, race/ethnicity, grade), this will help you highlight areas of targeted need.

Supports should be designed to improve school climate for the students who are most in need regardless of the subgroup(s) to which they belong. Targeting supports based on need as opposed to membership in a subgroup will support compliance with relevant civil rights laws.

If you are a district, click on Appendix A to go to initial guiding questions for Discipline scale scores by respondent characteristics.

If you are a school, click on Appendix B to go to initial guiding questions for Discipline scale scores by respondent characteristics.

Average (mean) topic area values also can be used to focus on a targeted approach to improving discipline.

---

\(^6\) Note that the EDSCLS platform does not produce crossed demographics (e.g., Asian females). Users can obtain crossed demographics analytically by downloading the raw data file.
If you are a **district**, click on Appendix C to go to initial guiding questions for overall average (mean) Discipline values by respondent characteristics.

If you are a **school**, click on Appendix D to go to initial guiding questions for overall average (mean) Discipline values by respondent characteristics.

3. **Digging Deeper Into the Data by Using Item-Level Data: Focus on a Targeted Approach**

After you have examined your scale scores (and average [mean] values, if you wish to use them), looking at item-level data may help you dig deeper to target specific areas or issues. (See the Data Interpretation Guide to learn more about examining item-level data.) Item-level results often can provide districts and schools with concrete information on discipline that may be more actionable, warranting more immediate implementation of interventions found on the Discipline webpage, as well as planning and preparation for longer term interventions and strategies.

Sites using the EDSCLS can produce percentage distributions and item averages (means) for each item in the survey that is included in the Discipline scale produced by the platform as well as any important Discipline items that are not in the scale but have been kept on the survey as stand-alone items.

These guiding questions include suggestions for examining item-level data about how:

- a. A Discipline item is perceived by individual respondent groups;
- b. A Discipline item is perceived across respondent groups, but only for items worded *exactly the same way* for each group (called comparable items); and
- c. Discipline items organized by content (called an item content group) are perceived across respondents.

These types of guiding questions are detailed here.

**A. Examining Discipline Items Within a Respondent Group**

You can compare individual Discipline items with each other within an individual respondent group (students, instructional staff, noninstructional staff, or parents/guardians). Comparing items in this way may provide districts and schools with concrete examples of discipline that may be more actionable, warranting more immediate implementation of interventions found on the Discipline webpage, as well as planning and preparing for longer term interventions and strategies.

However, we strongly encourage you not to focus excessively on a single item rather than the more robust construct (topic area) of which it is a part. If you focus change efforts solely on behaviors and attitudes as defined by specific items, you may run the risk of a form of unintentional “teaching to the test” in which you are able to show growth with respect to specific items even though perceptions of the underlying topic area have not changed.
When comparing the averages (means) of individual items, it is important to make sure that you are comparing "apples to apples." Sometimes a high average (mean) item value represents a positive perception, and sometimes a high average (mean) item value represents a negative perception, depending on how the item response options of 1–4 are valenced, or directed. If you want to compare averages (means) of items, go to the Data Interpretation Guide section on *item valence and reverse-coding* to access important information you will need before comparing them.

For sites using the EDSCLS, negatively valenced items are marked for you in the EDSCLS codebook and survey item lists (questionnaires) at [https://safesupportivelearning.ed.gov/edscls/administration](https://safesupportivelearning.ed.gov/edscls/administration) and in Table 1 below.

### B. Comparing Discipline Items Across Respondent Groups if Worded Exactly the Same Way

Item frequencies and averages (means) can be examined across respondent groups, *but only if the items are worded exactly the same way*. This approach is helpful in cases where differences between groups or subgroups of respondents were found in the Discipline scale scores (or average [mean] values, if applicable). For example, both instructional staff and noninstructional staff are presented with the item “This school effectively handles student discipline and behavior problems.” Because the survey items are identical, you can compare the responses of instructional staff to the responses of noninstructional staff on this item.

### C. Considering Discipline Item Content Groups

Although looking at scale scores and items in the survey is important in examining and interpreting your data, it may be overwhelming to examine all of the items at once, and you may want to look at them in chunks or groups by substantive content. You are free to use groups of items of similar substantive content that are important to your district or school. We provide examples from the EDSCLS in Table 1, although similar groupings may be found in other school climate surveys.

Table 1 displays items included in the EDSCLS Discipline scale from all respondent groups as well as any important stand-alone items that have been retained. In the table, we suggest the following areas of focus using the Discipline items in the EDSCLS: Discipline Policies/Procedures; Positive Support; Collaboration/Communication; and Fairness.
### Table 1. Item Content Groupings for the Cultural and Linguistic Competence Topic Area

#### Discipline Policies/Procedures

<table>
<thead>
<tr>
<th>Staff Type</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructional staff</td>
<td>This school effectively handles student discipline and behavior problems.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>This school effectively handles student discipline and behavior problems.</td>
</tr>
</tbody>
</table>

#### Positive Support

<table>
<thead>
<tr>
<th>Role</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>Adults working at this school reward students for positive behavior.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Staff at this school recognize students for positive behavior.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school encourage students to think about how their actions affect others.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school help students develop strategies to understand and control their feelings and actions.</td>
</tr>
</tbody>
</table>

#### Collaboration/Communication

<table>
<thead>
<tr>
<th>Role</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>My teachers make it clear to me when I have misbehaved in class.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Staff at this school are clearly informed about school policies and procedures.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Staff at this school work together to ensure an orderly environment.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school are clearly informed about school policies and procedures.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school work together to ensure an orderly environment.</td>
</tr>
<tr>
<td>Parents</td>
<td>When my child does something good at school, I usually hear about it from the school.</td>
</tr>
<tr>
<td>Parents</td>
<td>This school communicates school policies and procedures clearly to parents or guardians.</td>
</tr>
</tbody>
</table>

#### Fairness

<table>
<thead>
<tr>
<th>Role</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>School rules are applied equally to all students.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>School rules are applied equally to all students.</td>
</tr>
<tr>
<td>Parent</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Parent</td>
<td>School rules are applied equally to all students.</td>
</tr>
</tbody>
</table>
These content areas provide an example of how you can examine Discipline items in a meaningful way across respondent groups. Identifying differences in the perceptions of different respondent groups within the same block of items may be especially helpful in targeting action items for improvement.\(^7\)

For example, at least one question on each survey (i.e., students, instructional staff, noninstructional staff, parents) asks respondents about fairness, as follows:

<table>
<thead>
<tr>
<th>Role</th>
<th>Question</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Student</td>
<td>School rules are applied equally to all students.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>School rules are applied equally to all students.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>School rules are applied equally to all students.</td>
</tr>
<tr>
<td>Parent</td>
<td>Discipline is fair.</td>
</tr>
<tr>
<td>Parent</td>
<td>School rules are applied equally to all students.</td>
</tr>
</tbody>
</table>

Looking at these items in tandem may provide you with more in-depth information on whether your district or school needs to place more emphasis on applying discipline equitably. If you find that student responses on the Fairness item grouping are not as you would like (or if you find a discrepancy between the perceptions of students and other respondents), you may want to think about the following question:

What can my district or school do to provide a greater focus on discipline fairness at school?

Similarly, there are survey items that group together as Discipline Policies/Procedures. Looking at the results for this item content group may help you gauge how well your discipline efforts are being practiced. If you find that responses are not as favorable as you would like (or if you find a discrepancy among the perceptions of different respondent groups), consider the following:

What can my district or school do to better ensure that our discipline efforts are addressing the needs of students, staff, and parents?

What policies and procedures are currently in place in my school to enhance discipline? What new policies and procedures need to be implemented? Which policies and procedures should we consider modifying or eliminating? What are our state requirements in this area? What are our obligations under federal civil rights laws in this area?

Note: In all cases, you must comply with your obligations under federal civil rights laws and any applicable state requirements.

\(^7\) Note that these groupings are different than those for scale scores or average (mean) topic area values, which are derived analytically. The groupings in Table 1 are based on items with similar substantive content or areas of focus that may prove more actionable for districts and schools.
Appendix A: Guiding Questions for Districts

You can use the guiding questions in this appendix to help use your data to focus on universal and targeted approaches to discipline. In this appendix, you will find:

- Initial guiding questions (scale scores);
- Deeper guiding questions (overall);
- Deeper guiding questions (focused on interventions); and
- Other questions to consider.

**Initial Guiding Questions (GQs): District Scale Scores**

Scale scores are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area, is a more robust measure than just attempting to measure the topic by asking about it with a single item. For more information on scale scores, please see the *Data Interpretation Guide*.

**A Universal Approach**

GQ1. What does our **student** Discipline scale score tell us about how students perceive discipline in our district?

**For example, you can examine:**

- How do the student Discipline scale scores compare across schools in our district?
- How does our district’s student Discipline scale score compare with our state’s score (if available)?
- How does our district’s student Discipline scale score compare with our district’s student scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?
- Districts that use the EDSCLS can examine how the student benchmarked scale score levels compare across schools, compare with the district, with other topic areas within and across domains, and across respondent groups.

GQ2. What does our **instructional staff** Discipline scale score tell us about how these staff perceive discipline in our district?

**For example, you can examine:**

- How do the instructional staff Discipline scale scores compare across schools in our district?
- How does our district’s instructional staff Discipline scale score compare with our state’s score (if available)?
How does our district’s instructional staff scale score compare with our district’s instructional staff scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?

Districts that use the EDSCLS can examine how the instructional benchmarked scale score levels compare across schools, compare with the district, with other topic areas within and across domains, and across respondent groups.

GQ3. What does our noninstructional staff Discipline scale score tell us about how these staff perceive discipline in our district?

**For example, you can examine:**

- How do the noninstructional staff Discipline scale scores compare across schools in our district?
- How does our district’s noninstructional staff Discipline scale score compare with our state’s score (if available)?
- How does our district’s noninstructional staff scale score compare with our district’s noninstructional staff scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?
- Districts that use the EDSCLS can examine how the noninstructional benchmarked scale score levels compare across schools, compare with the district, with other topic areas within and across domains, and across respondent groups.

**A Targeted Approach**

GQ4. What do the district Discipline scale scores by respondent characteristics tell us about how different subgroups perceive discipline in our district?

**For example, you can examine:**

- How do the perceptions of discipline compare across various subgroups of students (e.g., White students versus Asian students)?
- How do the perceptions of discipline compare across various subgroups of instructional staff (e.g., Black or African-American staff versus Asian staff)?
- How do the perceptions of discipline compare across various subgroups of noninstructional staff (e.g., males versus females)?
- Districts that use the EDSCLS can examine how topic area benchmarked scale score levels compare across respondent groups and across respondent subgroups.
Deeper Guiding Questions (DGQs) About Data for Districts

A Universal Approach

DGQ1. Are there other district-level databases that can give us additional information about what is going on across stakeholders in the district and what actions to take (e.g., administrative data such as incident data, attendance/truancy data, graduation rates, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)? (Click on the Reference Manual for more information on aligning indicators.)

   a. Do they show the same picture of school climate as your district school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand universal discipline needs in our district?

DGQ2. Based on our overall Discipline scale scores, should we consider discipline a priority for improvement in our district?

A Targeted Approach

DGQ3. Are there other district-level databases that can tell us more about subgroups of students or staff who need support in discipline (e.g., administrative data such as incident data, attendance/truancy data, graduation rates, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)?

   a. Do they show the same picture of school climate as your district school climate survey data for these subgroups?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand targeted discipline needs in our district?

Now that you have considered these questions, what would you like to do next? You can:

- Click on item-level data to see how item-level results can help provide you with concrete examples of emotional safety that may be more immediately actionable.

Taking a deeper look within a single respondent group will allow for a more thorough picture of that group’s perceptions. You also can:

- Click on deeper guiding questions to help you put all your data (survey, administrative, and qualitative) into context.
- Click on Discipline to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide suggestions for strategies and interventions that may be implemented immediately.

If you have calculated average (mean) Emotional Safety values, you also can:

- Click on average (mean) Discipline values to look at Emotional Safety values across respondent groups.
DGQ4. If we are using a three-tiered system of support in our district, what do these data tell us about our use of resources within that system? Are our practices and programs addressing the needs identified by our data?
   a. What are our district’s Tier 1 resource distribution needs? Tier 2 needs? Tier 3 needs?

DGQ5. Based on our scale scores by respondent characteristics, should we consider discipline for certain subgroups of students and staff a priority for improvement in our district?

Other Questions to Consider

DGQ6. How can we drill down to further understand what students and other stakeholders think about discipline needs in our district (e.g., convene focus groups of students, staff, parents/guardians; conduct student fishbowls and facilitated discussion sessions)?

DGQ7. Based on our answers to these questions, what conversations do we need to have about using our resources, and with whom should we have them?

Deeper Guiding Questions About Interventions\(^8\) for Districts

A Universal Approach

DGQ8. What interventions pertaining to discipline are currently in place in our district and how can we best evaluate whether these interventions are working?

DGQ9. How can we ensure that these discipline interventions are implemented with fidelity?

DGQ10. How do we know which interventions are effective?
   a. How can we best evaluate whether these interventions are working?

A Targeted Approach

DGQ11. If we are using a three-tiered system of support in our district, what interventions pertaining to discipline have been shown to work that should be continued or expanded at each tier?

DGQ12. What interventions pertaining to discipline have been shown to work in other districts, per tier, and what are the conditions under which they work?

DGQ13. What resources do we need to improve discipline for our students, per tier, in our district?

DGQ14. Which subgroups of respondents have been found to be in need of targeted support?

DGQ15. What interventions pertaining to discipline have worked or are working and should be continued or expanded for students at higher levels of risk in our district?

\(^8\) Click on the Reference Manual for more information about interventions such as best practices, strategies, and programs; multi-tiered systems of support; and fidelity of implementation.
DGQ16. What new interventions pertaining to discipline can be introduced and implemented that will either provide new support or complement what is already being done at each tier?
   a. Why do we think these interventions would be more effective than current or past efforts?

DGQ17. How can we sustain (institutionalize) tiered support for improving conditions pertinent to discipline in our district?

Other Questions to Consider

DGQ18. How can we best fold training for implementing discipline interventions into professional development efforts?
   a. Which training efforts have been successful or unsuccessful in the past?
   b. Why were some efforts more successful than others?

Now that you have considered these questions, what would you like to do next? You can:

- Click on **item-level data** to see how item-level results can help provide you with concrete examples of discipline practices that may be more immediately actionable.
- Click on **Discipline** to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

If you have calculated average (mean) Discipline values, you also can:

- Click on **average (mean) Discipline values** to look at Discipline values across respondent groups.
Appendix B: Guiding Questions for Schools

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to discipline. In this appendix you will find:

- Initial guiding questions (scale scores);
- Deeper guiding questions (overall);
- Deeper guiding questions (focused on interventions); and
- Other questions to consider.

Initial Guiding Questions: School Scale Scores

Scale scores are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area, is a more robust measure than just attempting to measure the topic by asking about it with a single item. For more information on scale scores please see the Data Interpretation Guide.

A Universal Approach

GQ1. What does our student Discipline scale score tell us about how students perceive discipline in our school?

For example, you can examine:

- How does our school’s student Discipline scale score compare with our district’s student Discipline scale score (if available)?
- How does our school’s student Discipline scale score compare with our state’s score (if available)?
- How does our school’s student Discipline scale score compare with our school’s student scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?
- Schools that use the EDSCLS can examine how the student benchmarked scale score levels compare with those of the district (if available), with other topic areas within and across domains, and across respondent groups.

GQ2. What does our instructional staff Discipline scale score tell us about how these staff perceive discipline in our school?

For example, you can examine:

- How does our school’s instructional staff Discipline scale score compare with our district’s score (if available)?
- How does our school’s instructional staff Discipline scale score compare with our state’s score (if available)?

- How does our school’s instructional staff scale score compare with our school’s instructional staff scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?

- Schools that use the EDSCLS can examine how the instructional staff benchmarked scale score levels compare with those of the district (if available), with other topic areas within and across domains, and across respondent groups.

GQ3. What does our **noninstructional staff** Discipline scale score tell us about how staff perceive discipline in our school?

**For example, you can examine:**

- How does our school’s noninstructional staff Discipline scale score compare with our district’s score (if available)?

- How does our school’s noninstructional staff Discipline scale score compare with our state’s score (if available)?

- How does our school’s noninstructional staff scale score compare with our school’s noninstructional staff scores on other topic areas within the Environment domain—is it relatively low or high, or in the middle?

- Schools that use the EDSCLS can examine how the noninstructional staff benchmarked scale score levels compare with those of the district (if available), with other topic areas within and across domains, and across respondent groups.

**A Targeted Approach**

**GQ4.** What do the school Discipline scale scores **by respondent characteristics** tell us about how each subgroup perceives discipline in our school?

**For example, you can examine:**

- How do the perceptions of discipline compare across various subgroups of students (e.g., White students versus Asian students)?

- How do the perceptions of discipline compare across various subgroups of instructional staff (e.g., Black or African-American staff versus Asian staff)?

- How do the perceptions of discipline compare across various subgroups of noninstructional staff (e.g., males versus females)?

- Schools that use the EDSCLS can examine how topic area benchmarked scale score levels compare across respondent groups and across respondent subgroups.
Now that you have considered these questions, what would you like to do next? You can:
- Click on item-level data to see how item-level results can help provide you with concrete examples of discipline practices that may be more immediately actionable.

Taking a deeper look within a single respondent group will allow for a more thorough picture of that group’s perceptions.
You also can:
- Click on deeper guiding questions to help you put all your data (survey, administrative, and qualitative) into context.
- Click on Discipline to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide recommendations on strategies and interventions that may be implemented immediately.

If you have calculated average (mean) Discipline values, you also can:
- Click on average (mean) Discipline values to look at Discipline values across respondent groups.

Deeper Guiding Questions About Data for Schools

A Universal Approach

DGQ1. Are there school-level databases that can give us additional information about what is going on across stakeholders in the school and what actions to take (e.g., administrative data such as incident data, attendance/truancy data, graduation rates, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)? (Click on the Reference Manual for more information on aligning indicators.)
   a. Do they show the same picture of school climate as your school’s school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand universal discipline needs in our school?

DGQ2. Based on our overall Discipline scale scores, should we consider discipline a priority for improvement in our school?

A Targeted Approach

DGQ3. Are there other school-level databases that can tell us more about subgroups of students or staff needing support in discipline (e.g., administrative data such as incident data, attendance/truancy data, graduation rates, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)?
   a. Do they show the same picture of school climate as your school’s school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand targeted discipline needs in our school?
DGQ4. If we are using a three-tiered system of support in our school, what do these data tell us about our use of resources within that system? Are our practices and programs addressing the needs identified by our data?

a. What are our school’s Tier 1 resource distribution needs? Tier 2 needs? Tier 3 needs?

DGQ5. Based on our scale scores by respondent characteristics, should we consider discipline for certain subgroups of students and staff a priority for improvement in our school?

Other Questions to Consider

DGQ6. How can we drill down to further understand what students and other stakeholders think about discipline needs in our school (e.g., convene focus groups of students, staff, parents/guardians; conduct student fishbowls and facilitated discussion sessions).

DGQ7. Based on our answers to these questions, what conversations do we need to have about using our resources, and with whom should we have them?

Deeper Guiding Questions About Interventions* for Schools

A Universal Approach

DGQ8. What interventions pertaining to discipline are currently in place in our school, and how can we best evaluate whether these interventions are working?

DGQ9. How can we ensure that these discipline interventions are implemented with fidelity?

DGQ10. How do we know which interventions are effective?

a. How can we best evaluate whether these interventions are working?

A Targeted Approach

DGQ11. If we are using a three-tiered system of support in our school, what interventions pertaining to discipline have been shown to work that should be continued or expanded at each tier?

DGQ12. What interventions pertaining to discipline have been shown to work in other schools, per tier, and what are the conditions under which they work?

DGQ13. What resources do we need to improve discipline for our students, per tier, in our school?

DGQ14. Which subgroups of respondents have been found to be in need of targeted support?

DGQ15. What interventions pertaining to discipline have worked or are working for students in our school at higher levels of risk that should be continued or expanded?

DGQ16. What new interventions pertaining to discipline can be introduced and implemented that will either provide new support or complement what is already being done at each tier?

a. Why do we think these interventions would be more effective than current or past efforts?

Click on the Reference Manual for more information about interventions such as best practices, strategies, and programs; multi-tiered systems of support; and fidelity of implementation.
DGQ17. How can we sustain (institutionalize) tiered support for improving conditions pertinent to discipline in our school?

Other Questions to Consider

DGQ18. How can we best fold training for implementing discipline interventions into professional development efforts?
   
a. Which training efforts have been successful or unsuccessful in the past?
   
b. Why were some efforts more successful than others?

Now that you have considered these questions, what would you like to do next? You can:

■ Click on [item-level data](#) to see how item-level results can help provide you with concrete examples of discipline that may be more immediately actionable.

■ Click on [Discipline](#) to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

If you have calculated average (mean) Discipline values, you also can:

■ Click on [average (mean) Discipline values](#) to look at Discipline values across respondent groups.
Appendix C: Additional Guiding Questions: District Average (Mean) Discipline Values

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to discipline. In this appendix, you will find:

- Additional guiding questions (average [mean] Discipline values)

Average (mean) Discipline values (on a scale of 1–4) can help you see how favorably respondents perceive the topic area. Click on the Data Interpretation Guide to go to more information on average (mean) Discipline values and an explanation of the scale of 1–4.

**A Universal Approach**

GQ1. What does our **student** average (mean) Discipline value tell us about how students perceive discipline in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:

- How does our student average (mean) Discipline value compare with the average (mean) Discipline value for instructional staff in our district? For noninstructional staff in our district?

Comparing across topic areas:

- How does our student average (mean) Discipline value compare with the student average (mean) value of other topic areas of interest within and outside of the Environment domain?

GQ2. What does our **instructional staff** average (mean) Discipline value tell us how these staff perceive discipline in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:

- How does our instructional staff average (mean) Discipline value compare with the average (mean) Discipline value for noninstructional staff in our district? For students in our district?

Comparing across topic areas:

- How does our instructional staff average (mean) Discipline value compare with the instructional staff average (mean) value of other topic areas of interest within and outside of the Environment domain?
GQ3. What does our **noninstructional staff** average (mean) Discipline value tell us about how these staff perceive discipline in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our noninstructional staff average (mean) Discipline value compare with the average (mean) Discipline value for instructional staff in our district? For students in our district?

Comparing across topic areas:
- How does our noninstructional staff average (mean) Discipline value compare with the noninstructional staff average (mean) value of other topic areas of interest within and outside of the Environment domain?

---

**A Targeted Approach**

GQ4. What do our average (mean) Discipline values **by respondent characteristics** tell us about how students perceive discipline in our district?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Discipline value for certain subgroups of students (e.g., female students) compare with that subgroup’s average (mean) values on other topic areas within the Environment domain (e.g., female student average [mean] values on instructional environment)?

Comparing across respondent subgroups:
- How does the average (mean) Discipline value for certain student subgroups (e.g., female students) compare with that subgroup of instructional staff and noninstructional staff (i.e., female instructional staff and female noninstructional staff)?

---

GQ5. What do our average (mean) Discipline values **by respondent characteristics** tell us about how **instructional staff** perceive discipline in our district?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Discipline value for certain subgroups of instructional staff (e.g., Asian instructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Environment domain (e.g., Asian instructional staff average [mean] values on instructional environment)?

Comparing across respondent subgroups:
- How does the average (mean) Discipline value for certain instructional staff subgroups (e.g., Black or African-American instructional staff) compare with that subgroup of noninstructional staff and students (i.e., Black or African-American students and Black or African-American noninstructional staff)?
GQ6. What do our average (mean) Discipline values **by respondent characteristics** tell us about how **noninstructional staff** perceive discipline in our district?

For example, you can think about these comparisons:

**Comparing across topic areas:**
- How does the average (mean) Discipline value for certain subgroups of noninstructional staff (e.g., male noninstructional staff) compare with that subgroup's average (mean) values on other topic areas within the Environment domain (e.g., male noninstructional staff average [mean] values on instructional environment)?

**Comparing across respondent subgroups:**
- How does the average (mean) Discipline value for certain noninstructional subgroups (e.g., Asian noninstructional staff) compare with that subgroup of instructional staff and students (i.e., Asian students and Asian instructional staff)?

Now that you have considered these questions, what would you like to do next? You can:
- Click on **item-level data** to see how item-level results can help provide you with concrete examples of discipline practices that may be more immediately actionable.
- Click on **deeper guiding questions** to help you put all your data (survey, administrative, and qualitative) into context.
- Click on **Discipline** to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide suggestions for strategies and interventions that may be implemented immediately.
Appendix D: Additional Guiding Questions: School Average (Mean) Discipline Values

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to discipline. In this appendix, you will find:
- Additional guiding questions (average [mean] Discipline values)

Average (mean) Discipline values (on a scale of 1–4) can help you gauge how favorably respondents perceive the topic area. Click on the Data Interpretation Guide to go to more information on average (mean) Discipline values and an explanation of the scale of 1–4.

A Universal Approach

GQ1. What does our student average (mean) Discipline value tell us about how students perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our student average (mean) Discipline value compare with the average (mean) Discipline value for instructional staff in our school? For noninstructional staff in our school?

Comparing across topic areas:
- How does our student average (mean) Discipline value compare with the student average (mean) value of other topic areas of interest within and outside of the Environment domain?

GQ2. What does our instructional staff average (mean) Discipline value tell us about how these staff perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our instructional staff average (mean) Discipline value compare with the average (mean) Discipline value for noninstructional staff in our school? For students in our school?

Comparing across topic areas:
- How does our instructional staff average (mean) Discipline value compare with the instructional staff average (mean) value of other topic areas of interest within and outside of the Environment domain?
GQ3. What do our noninstructional staff average (mean) Discipline values tell us about how staff perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our noninstructional staff average (mean) Discipline value compare with the average (mean) Discipline value for instructional staff in our school? For students in our school?

Comparing across topic areas:
- How does our noninstructional staff average (mean) Discipline value compare with the noninstructional staff average (mean) value of other topic areas of interest within and outside of the Environment domain?

A Targeted Approach

GQ4. What do our average (mean) Discipline values by respondent characteristics tell us about how students perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does the average (mean) Discipline value for certain subgroups of students (e.g., female students) compare with that subgroup’s average (mean) values on other topic areas within the Environment domain (e.g., female student average [mean] values on instructional environment)?

Comparing across respondent subgroups:
- How does the average (mean) Discipline value for certain student subgroups (e.g., female students) compare with that subgroup of instructional staff and noninstructional staff (i.e., female instructional staff and female noninstructional staff)?

GQ5. What do our average (mean) Discipline values by respondent characteristics tell us about how instructional staff perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does the average (mean) Discipline value for certain subgroups of instructional staff (e.g., Asian instructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Environment domain (e.g., Asian instructional staff average [mean] values on instructional environment)?

Comparing across respondent subgroups:
- How does the average (mean) Discipline value for certain instructional staff subgroups (e.g., Black or African-American instructional staff) compare with that subgroup of noninstructional staff and students (i.e., Black or African-American students and Black or African-American noninstructional staff)?
GQ6. What do our average (mean) Discipline values by respondent characteristics tell us about how noninstructional staff perceive discipline in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does the average (mean) Discipline value for certain subgroups of noninstructional staff (e.g., male noninstructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Environment domain (e.g., male noninstructional staff average [mean] values on instructional environment)?

Comparing across respondent subgroups:
- How does the average (mean) Discipline value for certain noninstructional subgroups (e.g., Asian noninstructional staff) compare with that subgroup of instructional staff and students (i.e., Asian students and Asian instructional staff)?

Now that you have considered these questions, what would you like to do next? You can:
- Click on item-level data to see how item-level results can help provide you with concrete examples of discipline that may be more immediately actionable.
- Click on deeper guiding questions to help you to put all your data (survey, administrative, and qualitative) into context.
- Click on Discipline to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide suggestions for strategies and interventions that may be implemented immediately.
Disclaimer

This Discipline Topic Area Discussion Guide was designed and written under the U.S. Department of Education (Department) Contract Number EDESE12O0035 by the American Institutes for Research, the National Center on Safe Supportive Learning Environments (NCSSLE). Rita Foy Moss served as the contracting officer’s representative (COR) for the NCSSLE technical assistance center. This document contains resource materials that are provided for the user’s convenience.
