Introduction

This Discussion Guide provides suggestions to help you use your school climate data to make meaningful interpretations about the topic of Relationships within your state, district, or school, taking into account the viewpoints of the people who took the survey in your state, district, or school (i.e., students, instructional staff, noninstructional staff, parents/guardians). It accompanies the School Climate Improvement Resource Package (SCIRP) Data Interpretation Guide, which contains information, support, and resources to help you interpret and use your survey results, using the U.S. Department of Education (ED) School Climate Surveys (EDSCLS) model of school climate domains and topic areas as a framework. We encourage you to read the full Data Interpretation Guide before using this Discussion Guide so that you have a better understanding of the model and types of results you will see.

This document is intended for use by EDSCLS users as well as users of other school climate surveys, which often include a topic area similar in composition to the Relationships topic area in the EDSCLS. Directions specific to EDSCLS users are denoted in this guide with the EDSCLS logo (right).

This guide, along with the Data Interpretation Guide, can help you to derive meaning from your state’s, district’s or school’s Relationships results, which you can use to identify areas for improvement. In the following sections, you will find:

- A definition of relationships as it relates to school climate
- Guiding questions to help you think through your Relationships data from a multi-tiered perspective—universal and targeted (Click on the Data Interpretation Guide and the Reference Manual to find additional information on multi-tiered approaches.)
- Guiding questions organized around data types (Relationships scale scores, average [mean] Relationships values, and item-level Relationships data):
  - Initial and deeper guiding questions about Relationships for districts (Appendix A)
  - Initial and deeper guiding questions about Relationships for schools (Appendix B)

---

1 This document provides strategies applicable to public schools and districts, including charter authorizers, charter management organizations, education management organizations, individual charter schools, and charter local educational agencies.

2 Information in this Discussion Guide is pertinent to EDSCLS pilot sites as well as those administering the EDSCLS before fall 2017, at which time benchmark data are slated to be available in the web-based platform. This guide will be updated accordingly after the release of benchmark data.

3 States that host the EDSCLS can use the same suggestions as given for districts; states will also be able to compare data across their districts, as well as across their schools.
A link to a Relationships webpage that includes resources on interventions that districts and schools can implement immediately to address specific areas of need as well as longer term resources for improving relationships.

Additional guiding questions for those wishing to use average (mean) Relationship values:

- Initial and deeper guiding questions about relationships for **districts** using average (mean) Relationship values (Appendix C)
- Initial and deeper guiding questions about relationships for **schools** using average (mean) Relationship values (Appendix D)

Schools and districts are also required to report information about school climate pursuant to ED’s Civil Rights Data Collection (CRDC). Information collected by the EDSCLS or other similar surveys may help schools and districts prepare their responses to the CRDC survey. More information about the CRDC can be found at ocrdata.ed.gov.

### What Are Relationships?

For the purposes of interpreting data, we have defined *relationships* as positive connections among students, adults, and peers in the school setting that foster positive social interaction and establish a nurturing environment of trust and support.

You can find a brief overview on relationships as it relates to school climate [here](#).

### Guidance for Districts and Schools

1. **Examining Relationships Data Overall: Focus on a Universal Approach**

   You can use your Relationships scale scores and average (mean) Relationships values to focus on a universal approach to improving Relationships. Scale scores (described in the *Data Interpretation Guide*) are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area such as Relationships, is a more robust measure than just attempting to measure that topic by asking about it with a single item.

   After you have these data for your district’s or school’s students and staff, and you have read the *Data Interpretation Guide*, you can use initial guiding questions in Appendix A (for districts) and in Appendix B (for schools) to help make meaningful interpretations of your results.

   If you are a **district**, click on Appendix A to go to initial guiding questions for overall Relationship scale scores.

   If you are a **school**, click on Appendix B to go to initial guiding questions for overall Relationship scale scores.
Average (mean) topic area values (see “Appendix C. Average (Mean) Topic Area Values” in the Data Interpretation Guide) also can be used to focus on a universal approach to addressing relationships. As described in the Data Interpretation Guide, average (mean) topic area values can be used to gauge how favorably respondents perceive the topic.4

If you are a district, click on Appendix C to go to initial guiding questions for overall average (mean) Relationship values.

If you are a school, click on Appendix D to go to initial guiding questions for overall average (mean) Relationship values.

2. Examining Relationships Data Across Student and Staff Respondent Characteristics: Focus on a Targeted Approach

Relationships scale scores broken out by respondent characteristics provide a richer set of data and a way to see how perceptions of relationships differ across subgroups of students and staff.

Scale scores are produced for EDSCLS users for the following subgroups.5

- Student scale scores per topic area can be examined by:
  - Gender,
  - Race/ethnicity, and
  - Grade.

- Staff (instructional and noninstructional) scale scores per topic area can be examined by:
  - Gender and
  - Race/ethnicity.

Note: In the event of a possible disclosure risk that would allow a respondent or small subgroup of respondents to be identified (e.g., if there is only one Asian teacher in the school), the EDSCLS platform will suppress the results for that subgroup (i.e., results for that subgroup will not be shown). (To understand how a small subgroup perceives school climate, see the Reference Manual for tips on conducting interviews and focus groups.)

Examining student and staff perceptions of relationships in your district or school by respondent characteristics can be extremely useful, not only in understanding the areas of strength and weakness in your school environment, but also in targeting interventions. For example, if perceptions of relationships differ by student characteristics (gender, race/ethnicity, grade), this will help you highlight areas of targeted need.

---

4 Average (mean) topic area values are not directly available from the EDSCLS platform but can be calculated from raw survey data. See Appendix C in the Data Interpretation Guide to go to information about calculating, using, and interpreting average (mean) topic area values.

5 Note that the EDSCLS platform does not produce crossed demographics (e.g., Asian females). Users can obtain crossed demographics analytically by downloading the raw data file.
Supports should be designed to improve school climate for the students who are most in need regardless of the subgroup(s) to which they belong. Targeting supports based on need as opposed to membership in a subgroup will support compliance with relevant civil rights laws.

If you are a district, click on Appendix A to go to initial guiding questions for Relationship scale scores by respondent characteristics.

If you are a school, click on Appendix B to go to initial guiding questions for Relationship scale scores by respondent characteristics.

Average (mean) topic area values also can be used to focus on a targeted approach to improving relationships.

If you are a district, click on Appendix C to go to initial guiding questions for overall average (mean) Relationship values by respondent characteristics.

If you are a school, click on Appendix D to go to initial guiding questions for overall average (mean) Relationship values by respondent characteristics.

3. Digging Deeper Into the Data by Using Item-Level Data: Focus on a Targeted Approach

After you have examined your scale scores (and average [mean] Relationships values, if you wish to use them), looking at item-level data may help you to dig deeper to target specific areas or issues. (See page 8 in the Data Interpretation Guide to learn more about examining item-level data.) Item-level results can often provide districts and schools with concrete information on Relationships that may be more actionable, warranting more immediate implementation of interventions included in the relationships webpage, as well as planning and preparation for longer term interventions and strategies.

Sites using the EDSCLS receive percentage distributions and item averages (means) for each item in the survey that is included in the Relationships scale produced by the platform as well as any important Relationships items that are not in the scale but have been kept on the survey as stand-alone items. For pilot sites, they are included in your District or School Report PDF and are marked for you.

These guiding questions include suggestions for examining item-level data about how:

a. A Relationships item is perceived by individual respondent groups;

b. A Relationships item is perceived across respondent groups, but only for items worded exactly the same way for each group (called comparable items); and

c. Relationships items organized by content (called item content groups) are perceived across respondents.
These types of guiding questions are detailed here.

A. Examining Relationships Items Within a Respondent Group

You can compare individual Relationships items with each other within an individual respondent group (students, instructional staff, noninstructional staff, or parents/guardians). Comparing items in this way may provide districts and schools with concrete examples of relationships that may be more actionable, warranting more immediate implementation of interventions included in the Relationships webpage, as well as planning and preparation for longer term interventions and strategies.

However, we strongly encourage you to not focus excessively on a single item rather than the more robust construct (topic area) of which it is a part. If you focus change efforts solely on behaviors and attitudes as defined by specific items, you may run the risk of a form of unintentional “teaching to the test” in which you are able to show growth with respect to specific items even though perceptions of the underlying topic area have not changed.

When comparing the averages (means) of individual items, it is important to make sure that you are comparing “apples to apples.” Sometimes a high average (mean) item value represents a positive perception and sometimes a high average (mean) item value represents a negative perception, depending on how the item response options of 1–4 are valenced, or directed. If you want to compare item averages (means), go to the Data Interpretation Guide section on item valence and reverse-coding to access important information you will need before comparing them.6

For sites using the EDSCLS, negatively valenced items are marked for you in the EDSCLS platform, the District or School Report PDF (for pilot sites), and in Table 1.

B. Comparing Relationships Items Across Respondent Groups if Worded Exactly the Same Way

Item frequencies and averages (means) can be examined across respondent groups, but only if the items are worded exactly the same way. This approach is helpful in cases where differences between groups or subgroups of respondents were found in the Relationships scale scores (or average [mean] values, if applicable). For example, both instructional staff and noninstructional staff are presented with the item “Staff do a good job helping parents to support their children’s learning at home.” Because the survey items are identical, you can compare the responses of instructional staff to the responses of noninstructional staff on this item.

C. Considering Relationships Item Content Groups

Although looking at scale scores, average (mean) Relationships values, and items in the survey is important in examining and interpreting your data, it may be overwhelming to examine all of the items at once, and you may want to look at them in chunks or groups by substantive content. You are free to use groups of items of similar substantive content that are important to your district or

6 Note that all of the Relationships items are positively valenced; therefore, item averages (means) within this topic area can be directly compared.
school. We provide examples from the EDSCLS in Table 1, although similar groupings may be found in other school climate surveys.

Table 1 displays items included in the EDSCLS Relationships scale from all respondent groups as well as any important stand-alone items that have been retained. In the table, we suggest the following areas of focus using the Relationships items in the EDSCLS: Connection Between Staff and Students; Connection Between Family and School; Student-Student Relationships; and Staff Feeling of Belonging.

**Table 1. Item Content Groupings for the Relationships Topic Area**

**Connection Between Staff and Students**

<table>
<thead>
<tr>
<th>Group</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>Teachers understand my problems.</td>
</tr>
<tr>
<td>Student</td>
<td>Teachers are available when I need to talk with them.</td>
</tr>
<tr>
<td>Student</td>
<td>It is easy to talk with teachers at this school.</td>
</tr>
<tr>
<td>Student</td>
<td>My teachers care about me.</td>
</tr>
<tr>
<td>Student</td>
<td>At this school, there is a teacher or some other adult who students can go to if they need help because of sexual assault or dating violence.</td>
</tr>
<tr>
<td>Student</td>
<td>My teachers make me feel good about myself.</td>
</tr>
<tr>
<td>Student</td>
<td>If I am absent, there is a teacher or some other adult at school that will notice my absence.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>At this school students get along well with the staff.</td>
</tr>
</tbody>
</table>

**Connection Between Family and School**

<table>
<thead>
<tr>
<th>Group</th>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructional staff</td>
<td>Staff do a good job helping parents to support their children's learning at home.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>Staff do a good job helping parents understand when their child needs to learn social, emotional, and character skills.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>If a student has done something well or makes improvement, staff contact his or her parents.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>This school asks families to volunteer at the school.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>This school communicates with parents on a timely and ongoing basis.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>This school helps parents find community supports for their students who need them.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school do a good job helping parents support their children's learning at home.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school do a good job helping parents understand when their child needs to learn social and emotional skills.</td>
</tr>
<tr>
<td>Parent</td>
<td>This school helps me figure out what social and emotional skills my child needs to develop (e.g., self-control, problem solving, or getting along with others).</td>
</tr>
<tr>
<td>Parent</td>
<td>I feel welcome at this school.</td>
</tr>
<tr>
<td>Parent</td>
<td>This school encourages me to be an active partner in educating my child.</td>
</tr>
<tr>
<td>Parent</td>
<td>I feel comfortable talking to someone at this school about my child's behavior.</td>
</tr>
</tbody>
</table>
Student-Student Relationships

<table>
<thead>
<tr>
<th>Student</th>
<th>Students respect one another.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>Students like one another.</td>
</tr>
<tr>
<td>Parent</td>
<td>At this school, my child feels he or she belongs.</td>
</tr>
</tbody>
</table>

Staff Feeling of Belonging

<table>
<thead>
<tr>
<th>Noninstructional staff</th>
<th>At this school the staff get along well.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noninstructional staff</td>
<td>At this school there is a feeling of trust among the staff.</td>
</tr>
</tbody>
</table>

These content areas provide an example of how you can examine Relationships items in a meaningful way across respondent groups. Identifying differences in the perceptions across respondents within the same block of items may be especially helpful in targeting action items for improvement.7

For example, at least one question on the instructional staff, noninstructional staff, and parent surveys asks respondents about Connection Between Family and School, as follows:

<table>
<thead>
<tr>
<th>Instructional staff</th>
<th>Staff do a good job helping parents support their children's learning at home.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructional staff</td>
<td>Staff do a good job helping parents understand when their child needs to learn social, emotional, and character skills.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>If a student has done something well or makes improvement, staff contact his or her parents.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>This school asks families to volunteer at the school.</td>
</tr>
<tr>
<td>Instructional staff</td>
<td>This school communicates with parents on a timely and ongoing basis.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>This school helps parents find community supports for their students who need them.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school do a good job helping parents to support their children's learning at home.</td>
</tr>
<tr>
<td>Noninstructional staff</td>
<td>Staff at this school do a good job helping parents understand when their child needs to learn social and emotional skills.</td>
</tr>
<tr>
<td>Parent</td>
<td>This school helps me figure out what social and emotional skills my child needs to develop (e.g., self-control, problem solving, or getting along with others).</td>
</tr>
<tr>
<td>Parent</td>
<td>I feel welcome at this school.</td>
</tr>
<tr>
<td>Parent</td>
<td>This school encourages me to be an active partner in educating my child.</td>
</tr>
<tr>
<td>Parent</td>
<td>I feel comfortable talking to someone at this school about my child's behavior.</td>
</tr>
</tbody>
</table>

7 Note that these groupings are different from those for scale scores or average (mean) topic area values, which were derived analytically. The groupings in Table 1 are based on items with similar substantive content or areas of focus that may prove more actionable for districts and schools.
Looking at these items in tandem may provide you with more in-depth information on whether your district or school needs to place more emphasis on relationships. If you find that parents’ responses on the Connection Between Family and School item grouping are not as you would like (or if you find a discrepancy between the perceptions of parents and other respondents), you may want to think about the following question:

**What can my district or school do to provide a greater focus on relationships at school?**

Similarly, there are survey items that group together as Connection Between Staff and Students. Looking at the results for this item content group may help you gauge how well your healthy-relationship-building efforts are perceived. If you find that responses are not as favorable as you would like (or if you find a discrepancy among the perceptions of different respondent groups), consider the following:

**What can my district or school do to better ensure that our relationships efforts are addressing the needs of students, staff, and parents?**

What policies and procedures are currently in place in my school to support strong relationships? What new policies and procedures need to be implemented? Which policies and procedures should we consider modifying or eliminating? What are our state requirements in this area? What are our obligations under federal civil rights laws in this area?

*Note:* In all cases, you must comply with your obligations under federal civil rights laws and any applicable state requirements.
Appendix A: Guiding Questions for Districts

You can use the guiding questions in this appendix to help use your data to focus on universal and targeted approaches to Relationships. In this appendix, you will find:

- Initial guiding questions (scale scores);
- Deeper guiding questions (overall);
- Deeper guiding questions (focused on interventions); and
- Other questions to consider.

Initial Guiding Questions (GQs): District Scale Scores

Scale scores are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area, is a more robust measure than just attempting to measure the topic by asking about it with a single item. For more information on scale scores, please see the Data Interpretation Guide.

A Universal Approach

GQ1. What does our student Relationships scale score tell us about how students perceive relationships in our district?

For example, you can examine:

- How do the student Relationships scale scores compare across schools in our district?
- How does our district’s student Relationships scale score compare with our state’s score (if available)?
- How does our district’s student Relationships scale score compare with our district’s student scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

GQ2. What does our instructional staff Relationships scale score tell us about how these staff perceive relationships in our district?

For example, you can examine:

- How do the instructional staff Relationships scale scores compare across schools in our district?
- How does our district’s instructional staff Relationships scale score compare with our state’s score (if available)?
How does our district’s instructional staff scale score compare with our district’s instructional staff scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

GQ3. What does our noninstructional staff Relationships scale score tell us about how these staff perceive relationships in our district?

For example, you can examine:

- How do the noninstructional staff Relationships scale scores compare across schools in our district?
- How does our district’s noninstructional staff Relationships scale score compare with our state’s score (if available)?
- How does our district’s noninstructional staff scale score compare with our district’s noninstructional staff scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

A Targeted Approach

GQ4. What do the district Relationships scale scores by respondent characteristics tell us about how different subgroups perceive relationships in our district?

For example, you can examine:

- How the perceptions of relationships compare across various subgroups of students (e.g., White students versus Asian students)?
- How the perceptions of relationships compare across various subgroups of instructional staff (e.g., Black or African-American staff versus Asian staff)?
- How the perceptions of relationships compare across various subgroups of noninstructional staff (e.g., males versus females)?
Deeper Guiding Questions (DGQs) About Data for Districts

A Universal Approach

DGQ1. Are there other district-level databases that can give us additional information about what is going on across stakeholders in the district and what actions to take (e.g., student and teacher attendance data, administrative data such as incident data, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)? (Click on the Reference Manual for more information on aligning indicators.)
   a. Do they show the same picture of school climate as your district school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand universal needs about relationships in our district?

DGQ2. Based on our overall Relationships scale score, should we consider relationships a priority for improvement in our district?

A Targeted Approach

DGQ3. Are there other district-level databases that can tell us more about subgroups of students or staff needing support in relationships (e.g., student and teacher attendance data, administrative data such as incident data, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)?
   a. Do they show the same picture of school climate as your district school climate survey data for these subgroups?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand targeted needs regarding relationships in our district?
DGQ4. If we are using a three-tiered system of support in our district, what do these data tell us about our use of resources within that system? Are our practices and programs addressing the needs identified by our data?
   a. What are our district’s Tier 1 resource distribution needs? Tier 2 needs? Tier 3 needs?

DGQ5. Based on our scale scores **by respondent characteristics**, should we consider relationships for certain subgroups of students and staff a priority for improvement in our district?

**Other Questions to Consider**

DGQ6. How can we drill down to further understand what students and other stakeholders think about needs regarding relationships in our district (e.g., convene focus groups of students, staff, parents/guardians; conduct student fishbowls and facilitated discussion sessions).

DGQ7. Based on our answers to these questions, what conversations do we need to have about using our resources, and with whom should we have them?

**Deeper Guiding Questions About Interventions** for Districts

**A Universal Approach**

DGQ8. What interventions pertaining to relationships are currently in place in our district and how can we best evaluate whether these interventions are working?

DGQ9. How can we ensure that these relationships interventions are implemented with fidelity?

DGQ10. How do we know which interventions are effective?
   a. How can we best evaluate whether these interventions are working?

**A Targeted Approach**

DGQ11. If we are using a three-tiered system of support in our district, what interventions pertaining to Relationships have been shown to work that should be continued or expanded at each tier?

DGQ12. What interventions pertaining to relationships have been shown to work in other districts, per tier, and what are the conditions under which they work?

DGQ13. What resources do we need to improve relationships for our students, per tier, in our district?

DGQ14. Which subgroups of respondents have been found to be in need of targeted support?

DGQ15. What interventions pertaining to relationships have worked or are working and should be continued or expanded for students in our district at higher levels of risk?

---

8 Click on the [Reference Manual](#) to go to more information about interventions such as best practices, strategies, and programs; multi-tiered systems of support; and fidelity of implementation.
DGQ16. What new interventions pertaining to relationships can be introduced and implemented that will either provide new support or complement what is already being done at each tier?
   a. Why do we think these interventions would be more effective than current or past efforts?

DGQ17. How can we sustain (institutionalize) tiered support for improving conditions pertinent to relationships in our district?

Other Questions to Consider

DGQ18. How can we best fold training for implementing interventions pertaining to relationships into professional development efforts?
   a. Which training efforts have been successful or unsuccessful in the past?
   b. Why were some efforts more successful than others?

Now that you have considered these questions, what would you like to do next? You can:
- Click on item-level data to see how item-level results can help provide you with concrete examples of improving relationships that may be more immediately actionable.
- Click on the Relationships to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

If you have calculated average (mean) Relationships values, you also can:
- Click on average (mean) Relationships values to look at Relationships values across respondent groups.
Appendix B: Guiding Questions for Schools

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to relationships. In this appendix, you will find:

- Initial guiding questions (scale scores);
- Deeper guiding questions (overall);
- Deeper guiding questions (focused on interventions); and
- Other questions to consider.

Initial Guiding Questions: School Scale Scores

Scale scores are the premier way that the EDSCLS as well as many other school climate surveys measure school climate. A scale score, which combines multiple survey items related to different aspects of a topic area, is a more robust measure than just attempting to measure the topic by asking about it with a single item. For more information on scale scores, please see the Data Interpretation Guide.

A Universal Approach

GQ1. What does our student Relationships scale score tell us about how students perceive relationships in our school?

For example, you can examine:

- How does our school’s student Relationships scale score compare with our district’s student Relationships scale score (if available)?
- How does our school’s student School Participation scale score compare with our state’s score (if available)?
- How does our school’s student Relationships scale score compare with our school’s student scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

GQ2. What does our instructional staff Relationships scale score tell us about how these staff perceive relationships in our school?

For example, you can examine:

- How does our school’s instructional staff Relationships scale score compare with our district’s score (if available)?
- How does our school’s instructional staff Relationships scale score compare with our state’s score (if available)?
■ How does our school’s instructional staff scale score compare with our school’s instructional staff scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

GQ3. What does our noninstructional staff Relationships scale score tell us about how staff perceive relationships in our school?

For example, you can examine:

■ How does our school’s noninstructional staff Relationships scale score compare with our district’s score (if available)?
■ How does our district’s noninstructional staff Relationships scale score compare with our state’s score (if available)?
■ How does our school’s noninstructional staff scale score compare with our school’s noninstructional staff scores on other topic areas within the Engagement domain—is it relatively low or high, or in the middle?

A Targeted Approach

GQ4. What do the school Relationships scale scores by respondent characteristics tell us about how each subgroup perceives relationships in our school?

For example, you can examine:

■ How the perceptions of Relationships compare across various subgroups of students (e.g., males versus females)?
■ How the perceptions of Relationships compare across various subgroups of instructional staff (e.g., males versus females)?
■ How the perceptions of Relationships compare across various subgroups of noninstructional staff (e.g., males versus females)?
Deeper Guiding Questions About Data for Schools

A Universal Approach

DGQ1. Are there school-level databases that can give us additional information about what is going on across stakeholders in the school and what actions to take (e.g., administrative data such as incident data, attendance/truancy data, graduation rates, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)? (Click on the Reference Manual for more information on aligning indicators.)
   a. Do they show the same picture of school climate as your school’s school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand universal needs pertaining to relationships in our school?

DGQ2. Based on our overall Relationships scale score and average (mean) Relationships value, should we consider relationships a priority for improvement in our school?

A Targeted Approach

DGQ3. Are there other school-level databases that can tell us more about subgroups of students or staff needing support in relationships (e.g., student teacher attendance data, administrative data such as incident data, office discipline referrals and disciplinary actions, as well as other data such as Youth Risk Behavior Surveillance System survey data, if available)?
   a. Do they show the same picture of school climate as your school’s school climate survey data?
   b. What additional information do these data give us?
   c. How can we use these data to help us understand targeted needs pertaining to relationships in our school?
DGQ4. If we are using a three-tiered system of support in our school, what do these data tell us about our use of resources within that system? Are our practices and programs addressing the needs identified by our data?
   a. What are our school’s Tier 1 resource distribution needs? Tier 2 needs? Tier 3 needs?

DGQ5. Based on our scale scores and average (mean) Relationships values by respondent characteristics, should we consider relationships for certain subgroups of students and staff a priority for improvement in our school?

Other Questions to Consider

DGQ6. How can we drill down to further understand what students and other stakeholders think about needs pertaining to relationships in our school (e.g., convene focus groups of students, staff, parents/guardians; conduct student fishbowls and facilitated discussion sessions).

DGQ7. Based on our answers to these questions, what conversations do we need to have about using our resources, and with whom should we have them?

Deeper Guiding Questions About Interventions9 for Schools

A Universal Approach

DGQ8. What interventions pertaining to relationships are currently in place in our school and how can we best evaluate whether these interventions are working?

DGQ9. How can we ensure that these interventions pertaining to relationships are implemented with fidelity?

DGQ10. How do we know which interventions are effective?
   a. How can we best evaluate whether these interventions are working?

A Targeted Approach

DGQ11. If we are using a three-tiered system of support in our school, what interventions pertaining to relationships have been shown to work that should be continued or expanded at each tier?

DGQ12. What interventions pertaining to relationships have been shown to work in other schools, per tier, and what are the conditions under which they work?

DGQ13. What resources do we need to improve relationships for our students, per tier, in our school?

DGQ14. Which subgroups of respondents have been found to be in need of targeted support?

DGQ15. What interventions pertaining to relationships have worked or are working for students in our school at higher levels of risk that should be continued or expanded?

---

9 Click on the Reference Manual to go to more information about interventions such as best practices, strategies, and programs; multi-tiered systems of support; and fidelity of implementation.
DGQ16. What new interventions pertaining to relationships can be introduced and implemented that will either provide new support or complement what is already being done at each tier?  
   a. Why do we think these interventions would be more effective than current or past efforts?  

DGQ17. How can we sustain (institutionalize) tiered support for improving conditions pertinent to relationships in our school?  

**Other Questions to Consider**  

DGQ18. How can we best fold training for implementing interventions related to relationships into professional development efforts?  
   a. Which training efforts have been successful or unsuccessful in the past?  
   b. Why were some efforts more successful than others?  

Now that you have considered these questions, what would you like to do next? You can:  
- Click on **item-level data** to see how item-level results can help provide you with concrete examples of improving Relationships that may be more immediately actionable.  
- Click on **Relationships** to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.  

If you have calculated average (mean) Relationships values, you also can:  
- Click on **average (mean) Relationships values** to look at Relationship values across respondent groups.
Appendix C: Additional Guiding Questions: District Average (Mean) Relationships Values

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to relationships. In this appendix, you will find:

- Additional guiding questions (average [mean] Relationships values)

Average (mean) Relationships values (on a scale of 1–4) can help you see how favorably respondents perceive the topic area. Click on the Data Interpretation Guide to go to more information on average (mean) Relationships values and an explanation of the scale of 1–4.

A Universal Approach

GQ1. What does our student average (mean) Relationships value tell us about how students perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our student average (mean) Relationships value compare with the average (mean) Relationships value for instructional staff in our district? For noninstructional staff in our district?

Comparing across topic areas:
- How does our student average (mean) Relationships value compare with the student average (mean) value of other topic areas of interest, within and outside of the Engagement domain?

GQ2. What does our instructional staff average (mean) Relationships value tell us how these staff perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our instructional staff average (mean) Relationships value compare with the average (mean) Relationships value for noninstructional staff in our district? For students in our district?

Comparing across topic areas:
- How does our instructional staff average (mean) Relationships value compare with the instructional staff average (mean) value of other topic areas of interest, within and outside of the Engagement domain?
GQ3. What does our noninstructional staff average (mean) Relationships value tell us about how these staff perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our noninstructional staff average (mean) Relationships value compare with the average (mean) Relationships value for instructional staff in our district? For students in our district?

Comparing across topic areas:
- How does our noninstructional staff average (mean) Relationships value compare with the noninstructional staff average (mean) value of other topic areas of interest, within and outside of the Engagement domain?

A Targeted Approach

GQ4. What do our average (mean) Relationships values by respondent characteristics tell us about how students perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Relationships value for certain subgroups of students (e.g., female students) compare with that subgroup's average (mean) values on other topic areas within the Engagement domain (e.g., female student average [mean] values on School Participation)?

Comparing across respondent subgroups:
- How does the average (mean) Relationships value for certain student subgroups (e.g., female students) compare with that subgroup of instructional staff and noninstructional staff (i.e., female instructional staff and female noninstructional staff)?

GQ5. What do our average (mean) Relationships values by respondent characteristics tell us about how instructional staff perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Relationships value for certain subgroups of instructional staff (e.g., Asian instructional staff) compare with that subgroup's average (mean) values on other topic areas within the Engagement domain (e.g., Asian instructional staff average [mean] values on School Participation)?

Comparing across respondent subgroups:
- How does the average (mean) Relationships value for certain instructional staff subgroups (e.g., Black or African-American instructional staff) compare with that subgroup of
noninstructional staff and students (i.e., Black or African-American students and Black or African-American noninstructional staff)?

GQ6. What do our average (mean) Relationships values by respondent characteristics tell us about how noninstructional staff perceive relationships in our district?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Relationships value for certain subgroups of noninstructional staff (e.g., male noninstructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Engagement domain (e.g., male noninstructional staff average [mean] values on School Participation)?

Comparing across respondent subgroups:
- How does the average (mean) Relationships value for certain noninstructional subgroups (e.g., Asian noninstructional staff) compare with that subgroup of instructional staff and students (i.e., Asian students and Asian instructional staff)?

Now that you have considered these questions, what would you like to do next? You can:
- Click on item-level data to see how item-level results can help provide you with concrete examples of strengthening relationships that may be more immediately actionable.
- Click on deeper guiding questions to help you to put all your data (survey, administrative, and qualitative) into context.
- Click on Relationships to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide suggestions for strategies and interventions that may be implemented immediately.
Appendix D: Additional Guiding Questions: School Average (Mean) Relationships Values

You can use the guiding questions in this appendix to help you use your data to focus on universal and targeted approaches to relationships. In this appendix, you will find:

- Additional guiding questions (average [mean] Relationships values)

Average (mean) Relationships values (on a scale of 1–4) can help you gauge how favorably respondents perceive the topic area. Click on the Data Interpretation Guide to go to more information on average (mean) Relationships values and an explanation of the scale of 1–4.

A Universal Approach

GQ1. What does our student average (mean) Relationships value tell us about how students perceive relationships in our school?

**For example, you can think about these comparisons:**

Comparing across respondent groups:

- How does our student average (mean) Relationships value compare with the average (mean) Relationships value for instructional staff in our school? For noninstructional staff in our school?

Comparing across topic areas:

- How does our student average (mean) Relationships value compare with the student average (mean) value of other topic areas of interest, within and outside of the Engagement domain?

GQ2. What does our instructional staff Relationships average (mean) value tell us about how these staff perceive relationships in our school?

**For example, you can think about these comparisons:**

Comparing across respondent groups:

- How does our instructional staff average (mean) Relationships value compare with the average (mean) Relationships value for noninstructional staff in our school? For students in our school?

Comparing across topic areas:

- How does our instructional staff average (mean) Relationships value compare with the instructional staff average (mean) value of other topic areas of interest, within and outside of the Engagement domain?
GQ3. What does our noninstructional staff average (mean) Relationships value tell us about how staff perceive relationships in our school?

For example, you can think about these comparisons:

Comparing across respondent groups:
- How does our noninstructional staff average (mean) Relationships value compare with the average (mean) Relationships value for instructional staff in our school? For students in our school?

Comparing across topic areas:
- How does our noninstructional staff average (mean) Relationships value compare with the noninstructional staff average (mean) value of other topic areas of interest, within and outside of the Engagement domain?

A Targeted Approach

GQ4. What do our average (mean) Relationships values by respondent characteristics tell us about how students perceive relationships in our school?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Relationships value for certain subgroups of students (e.g., female students) compare with that subgroup’s average (mean) values on other topic areas within the Engagement domain (e.g., female student average [mean] values on School Participation)?

Comparing across respondent subgroups:
- How does the average (mean) Relationships value for certain student subgroups (e.g., female students) compare with that subgroup of instructional staff and noninstructional staff (i.e., female instructional staff and female noninstructional staff)?

GQ5. What do our average (mean) Relationships values by respondent characteristics tell us about how instructional staff perceive relationships in our school?

For example, you can think about these comparisons:

Comparing across topic areas:
- How does the average (mean) Relationships value for certain subgroups of instructional staff (e.g., Asian instructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Engagement domain (e.g., Asian instructional staff average [mean] values on School Participation)?

Comparing across respondent subgroups:
- How does the average (mean) Relationships value for certain instructional staff subgroups (e.g., Black or African-American instructional staff) compare with that subgroup of
noninstructional staff and students (i.e., Black or African-American students and Black or African-American noninstructional staff)?

GQ6. What do our average (mean) Relationships values by respondent characteristics tell us about how noninstructional staff perceive relationships in our school?

For example, you can think about these comparisons:

Comparing across topic areas:

■ How does the average (mean) Relationships value for certain subgroups of noninstructional staff (e.g., male noninstructional staff) compare with that subgroup’s average (mean) values on other topic areas within the Engagement domain (e.g., male noninstructional staff average [mean] values on student-student relationships)?

Comparing across respondent subgroups:

■ How does the average (mean) Relationships value for certain noninstructional subgroups (e.g., Asian noninstructional staff) compare with that subgroup of instructional staff and students (i.e., Asian students and Asian instructional staff)?

Now that you have considered these questions, what would you like to do next? You can:

■ Click on item-level data to see how item-level results can help provide you with concrete examples of improving Relationships that may be more immediately actionable.

■ Click on deeper guiding questions to help you to put all your data (survey, administrative, and qualitative) into context.

■ Click on Relationships to go to a webpage with suggestions for interventions that can be implemented immediately as well as longer term strategies and interventions.

Examining the deeper guiding questions will help you more thoroughly put your data into context and use them moving forward, whereas the webpage will provide suggestions on strategies and interventions that may be implemented immediately.
Disclaimer

This *Interpreting Relationships Topic Area Discussion Guide* was designed and written under the U.S. Department of Education (Department) Contract Number EDESE12O0035 by American Institutes for Research, the National Center on Safe Supportive Learning Environments (NCSSLE). Rita Foy Moss served as the contracting officer’s representative (COR) for the NCSSLE technical assistance center.
